

Stella and the Changing Moon

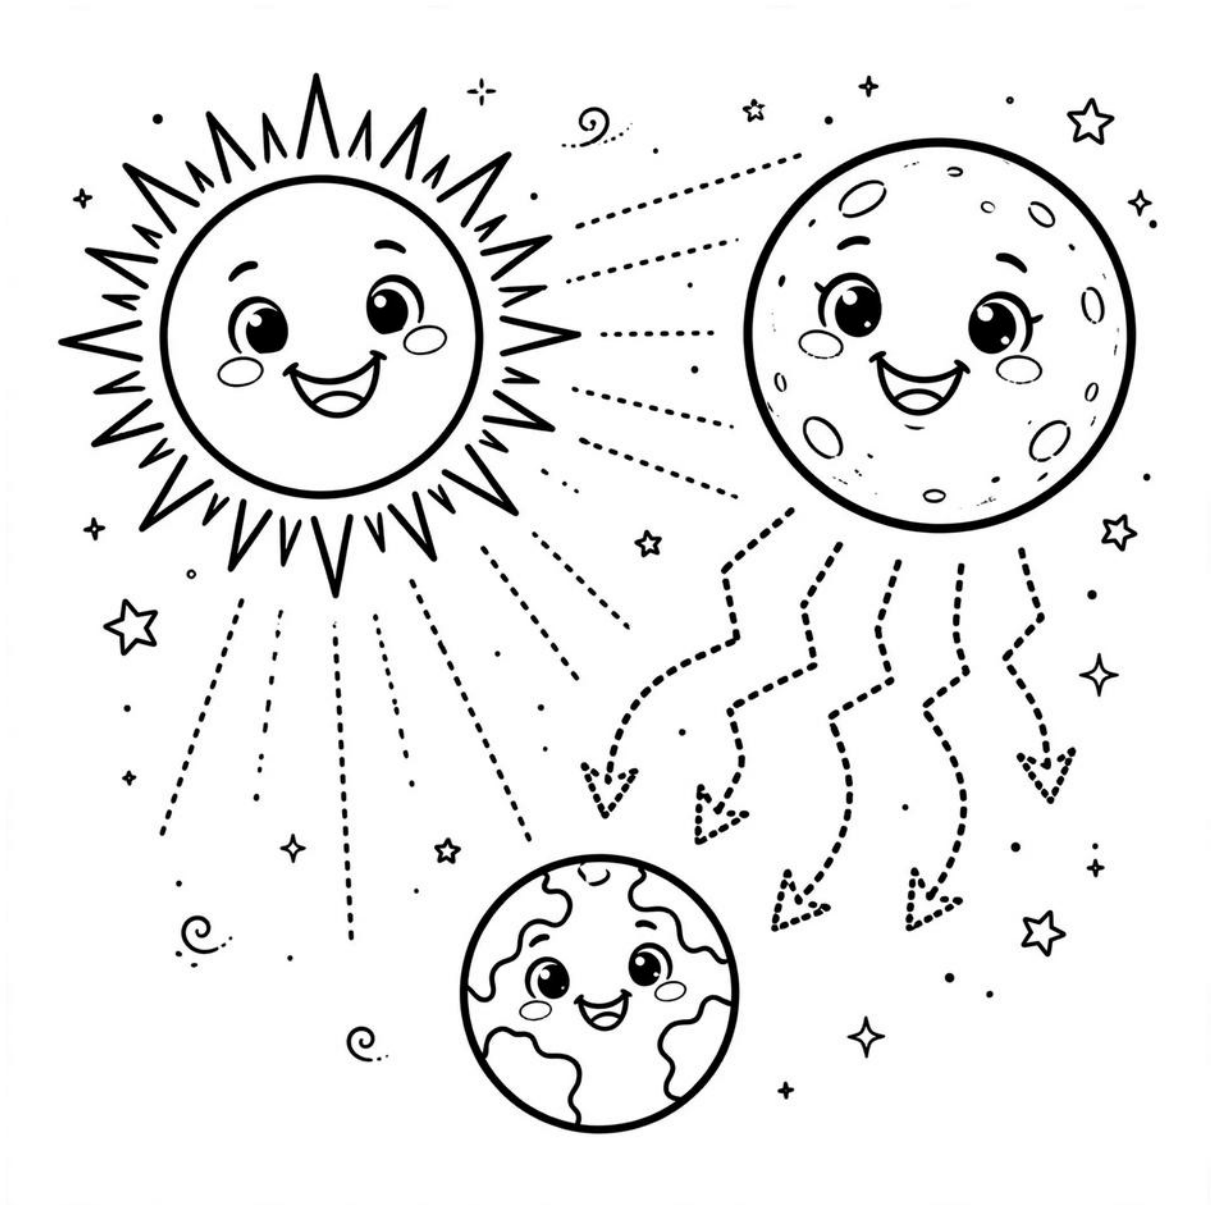

Savage AI Studios

The Moon Is a Big Ball

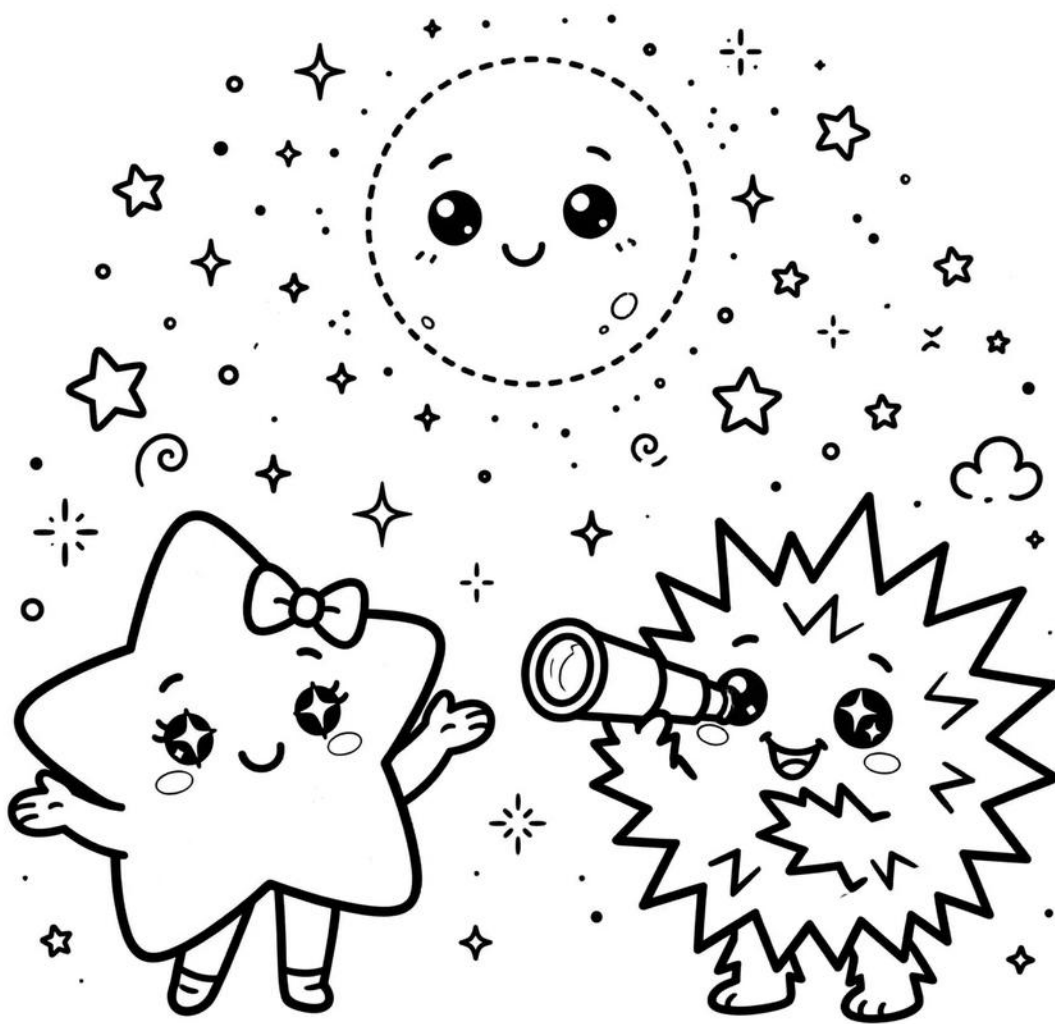

The moon is a giant ball of rock floating in space — like a huge marble!

Borrowed Sunshine

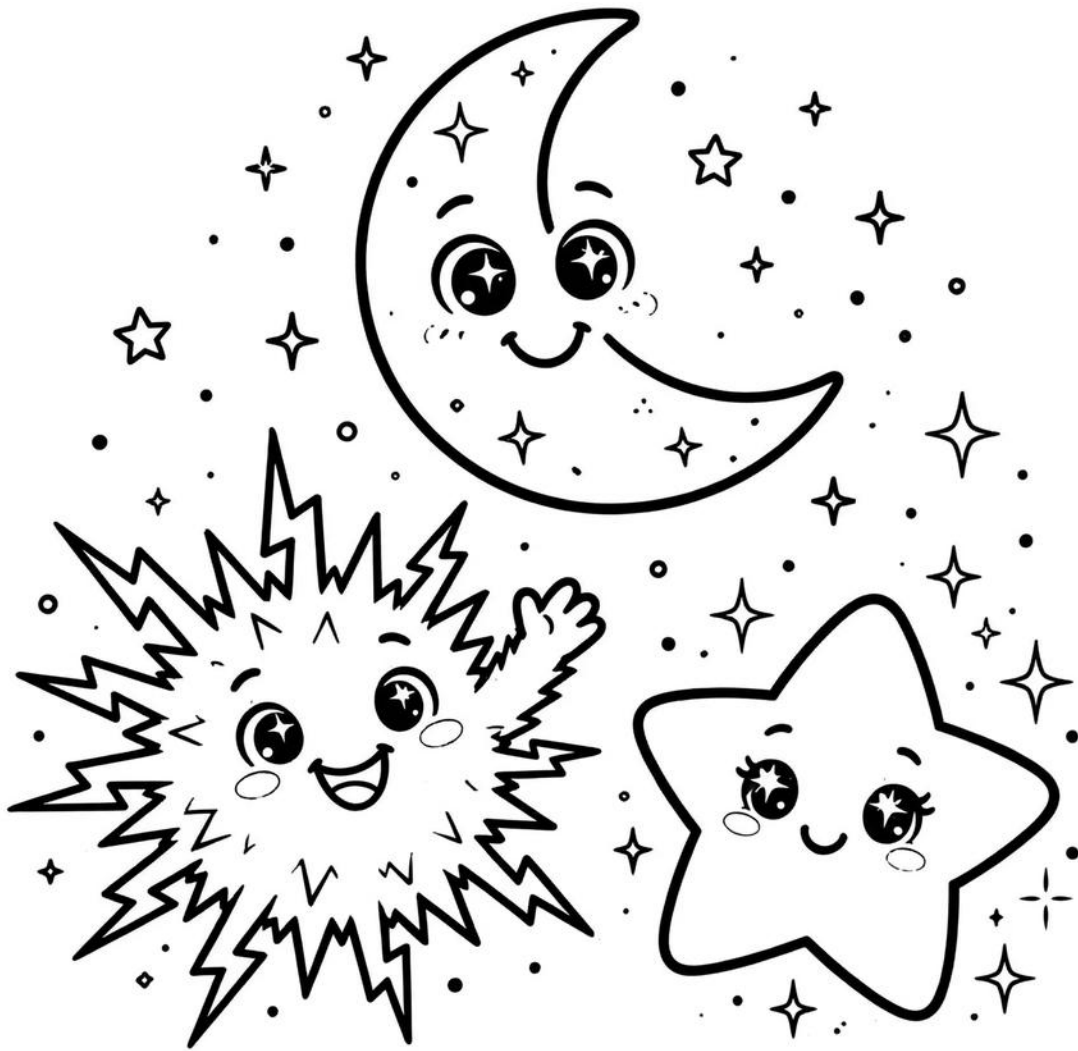

The moon makes no light of its own. It borrows sunshine,
like a mirror!

The New Moon

When the moon's dark side faces us, we can't see it at all.
That's a new moon!

Hello, Crescent!

A sunny sliver peeks out — a crescent moon, thin as a fingernail!

Half and Half

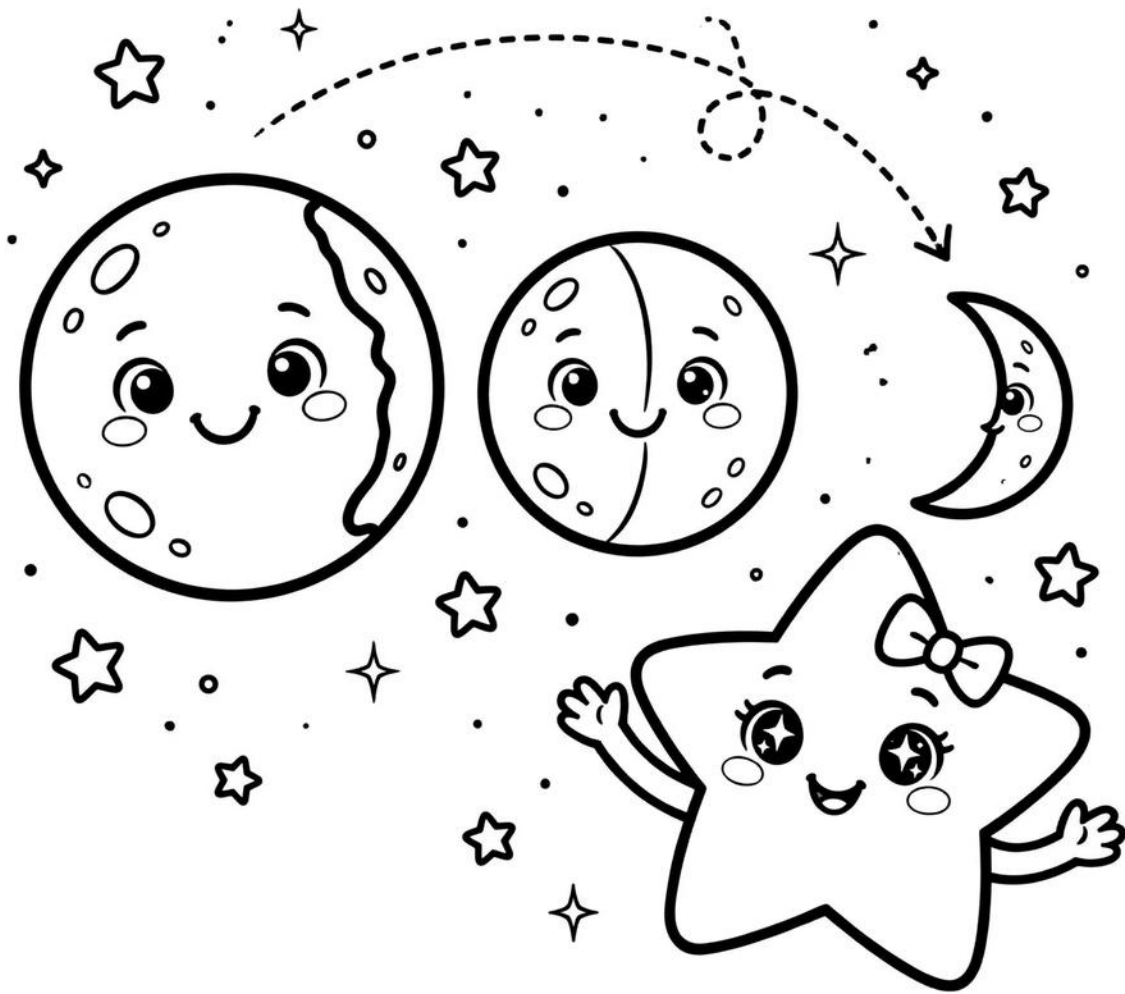

Half light, half dark — the moon is sharing equally tonight.

Full Moon Glow

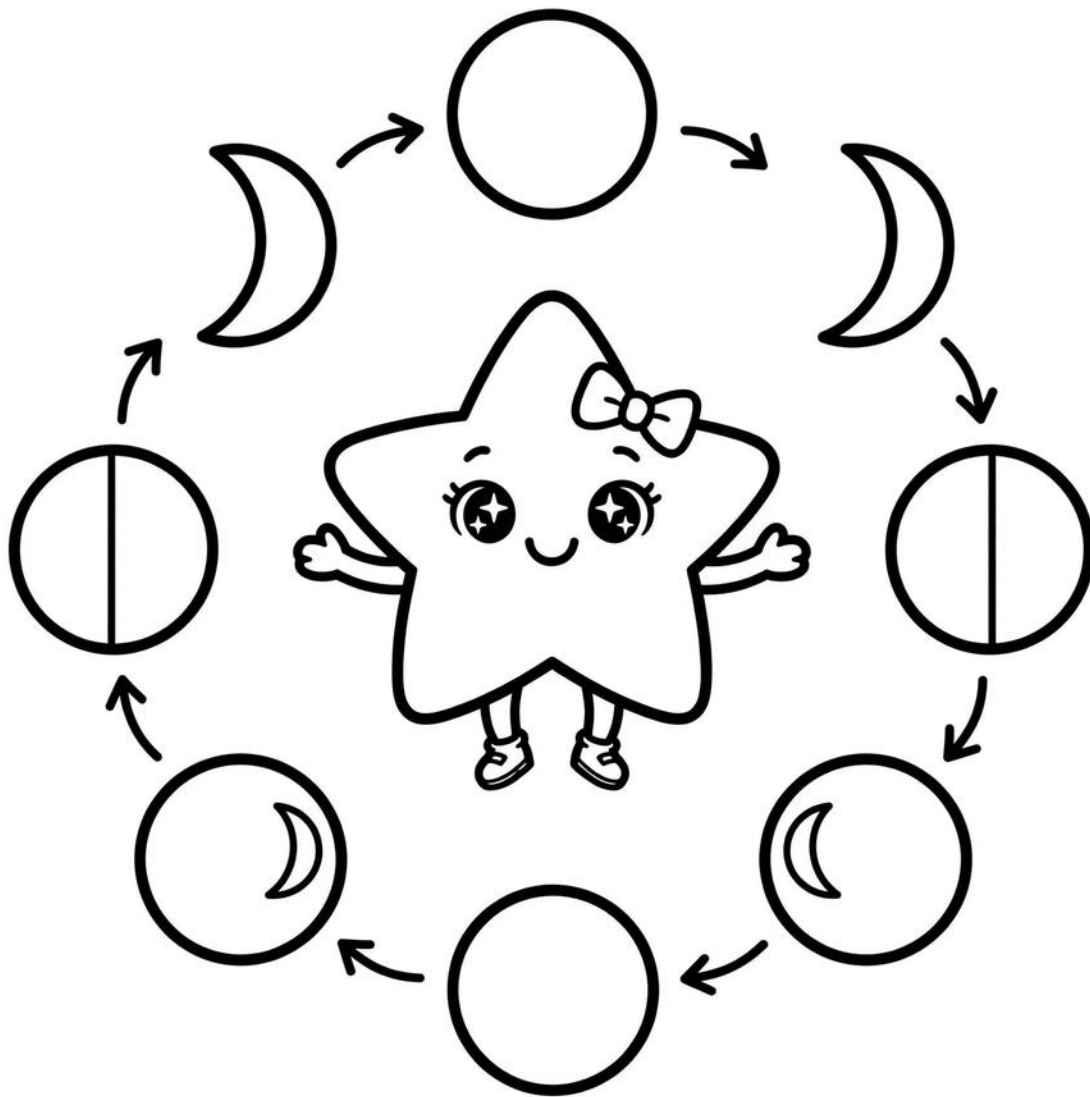

The whole round face glows bright. Hello, full moon!

Shrinking Away

Night by night, the light shrinks away again — bye for now!

One Month Round Trip

The whole shape-show takes about one month, then starts all over!

Stella's Night Watch

Stella loves watching the moon change her dress every single night.
