

Fixit and the Big Bridge

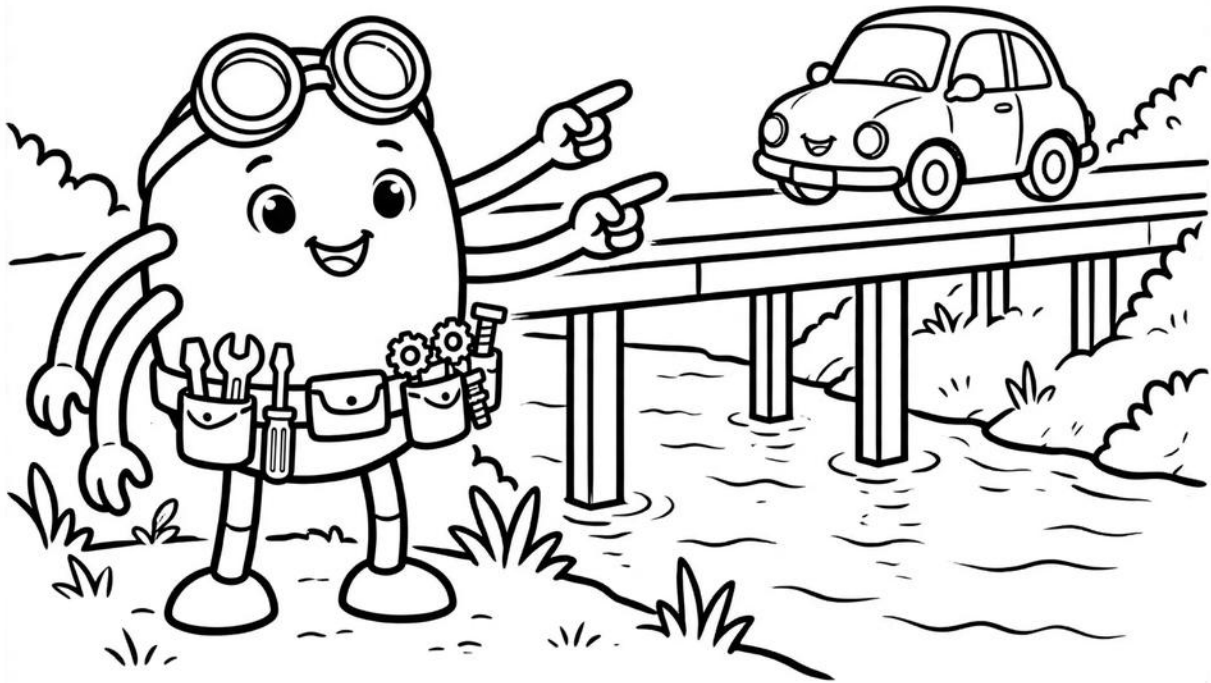

Savage AI Studios

A Tricky Problem

Cars need to cross the wide river — but the water is too deep to drive through!

Strong Beams

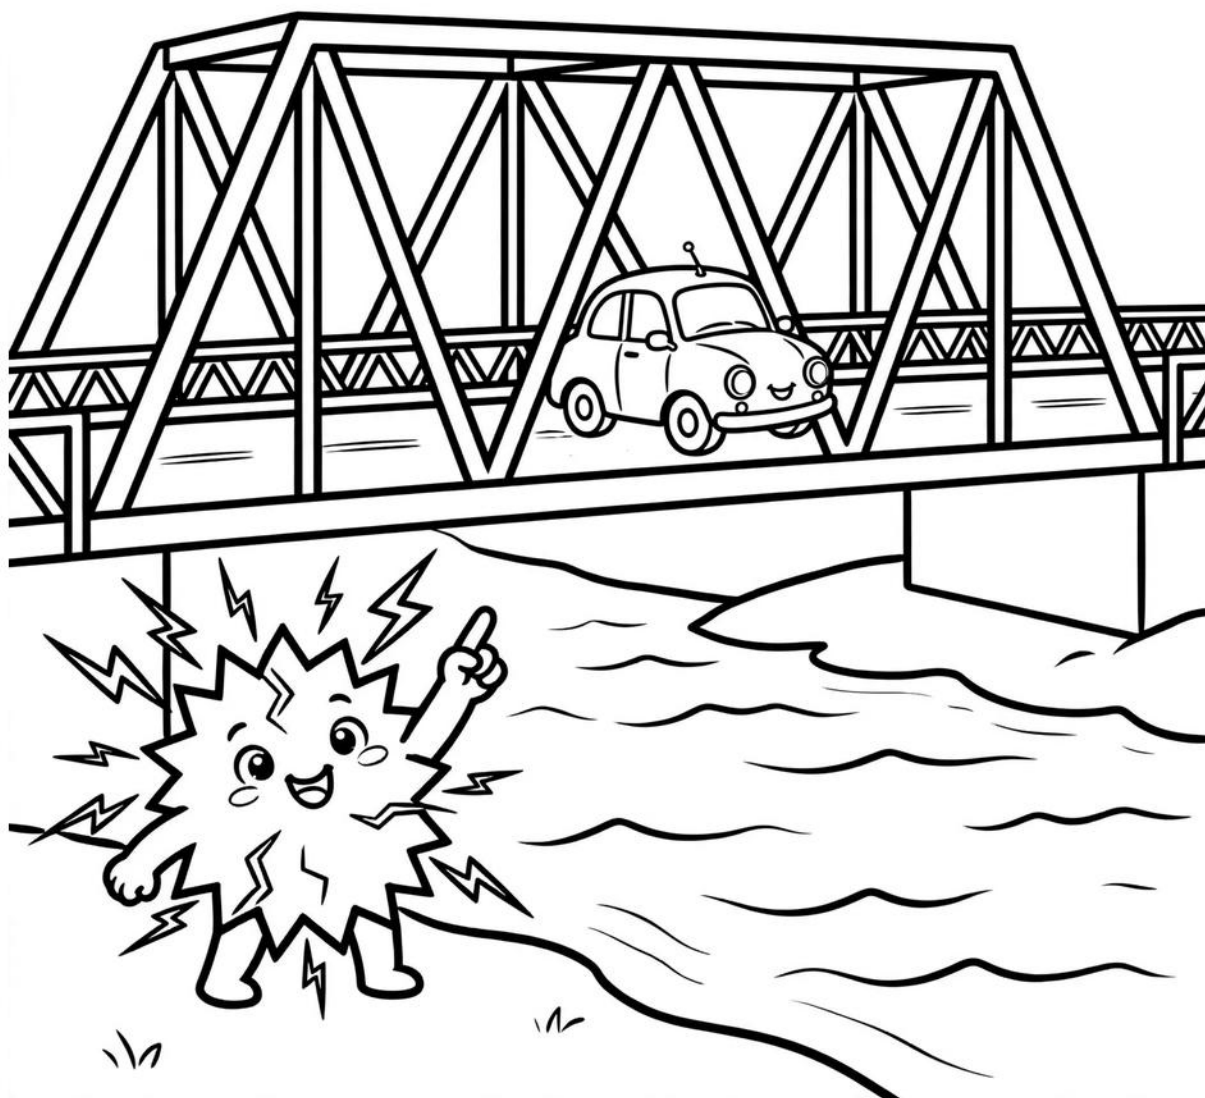

Long strong beams stretch across the gap, stiff like a diving board.

Mighty Arches

Arches squeeze all the weight down into the ground on both sides.

Trusty Triangles

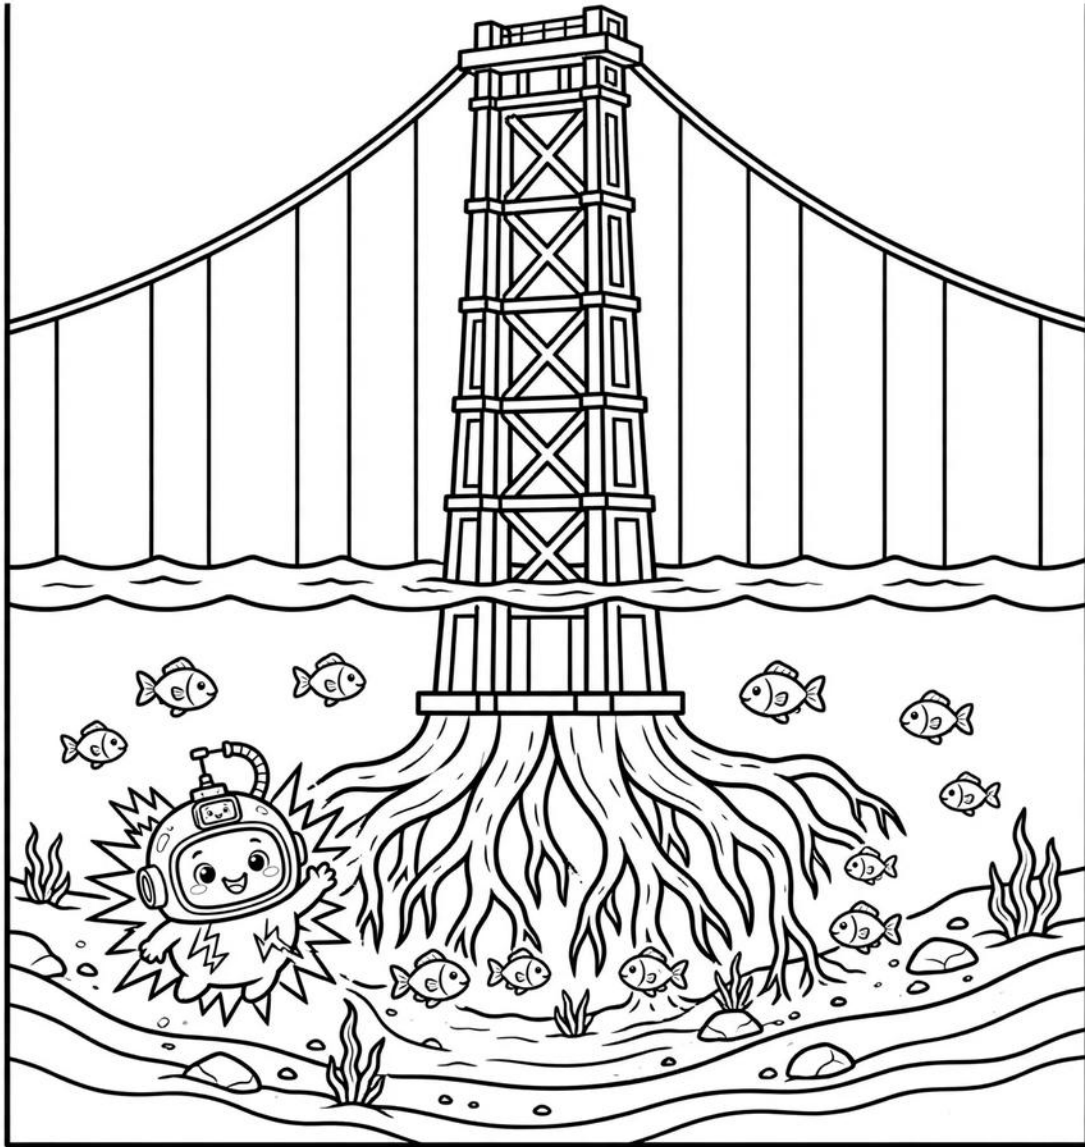

Triangles are the strongest shape — bridges hide them everywhere!

Hanging by Cables

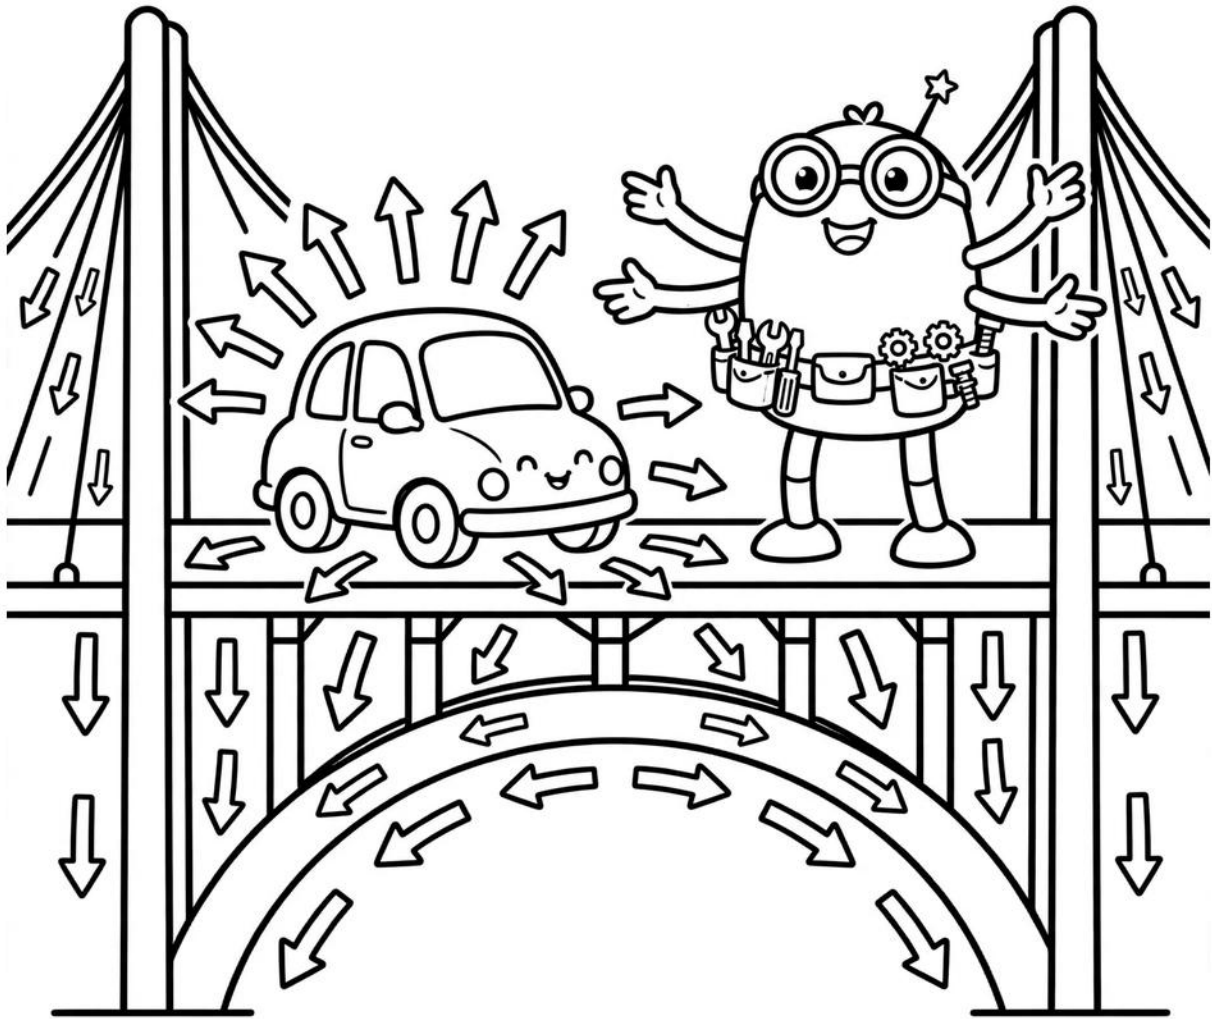

Strong cables hang the road from tall towers, like a giant hammock.

Towers with Deep Feet

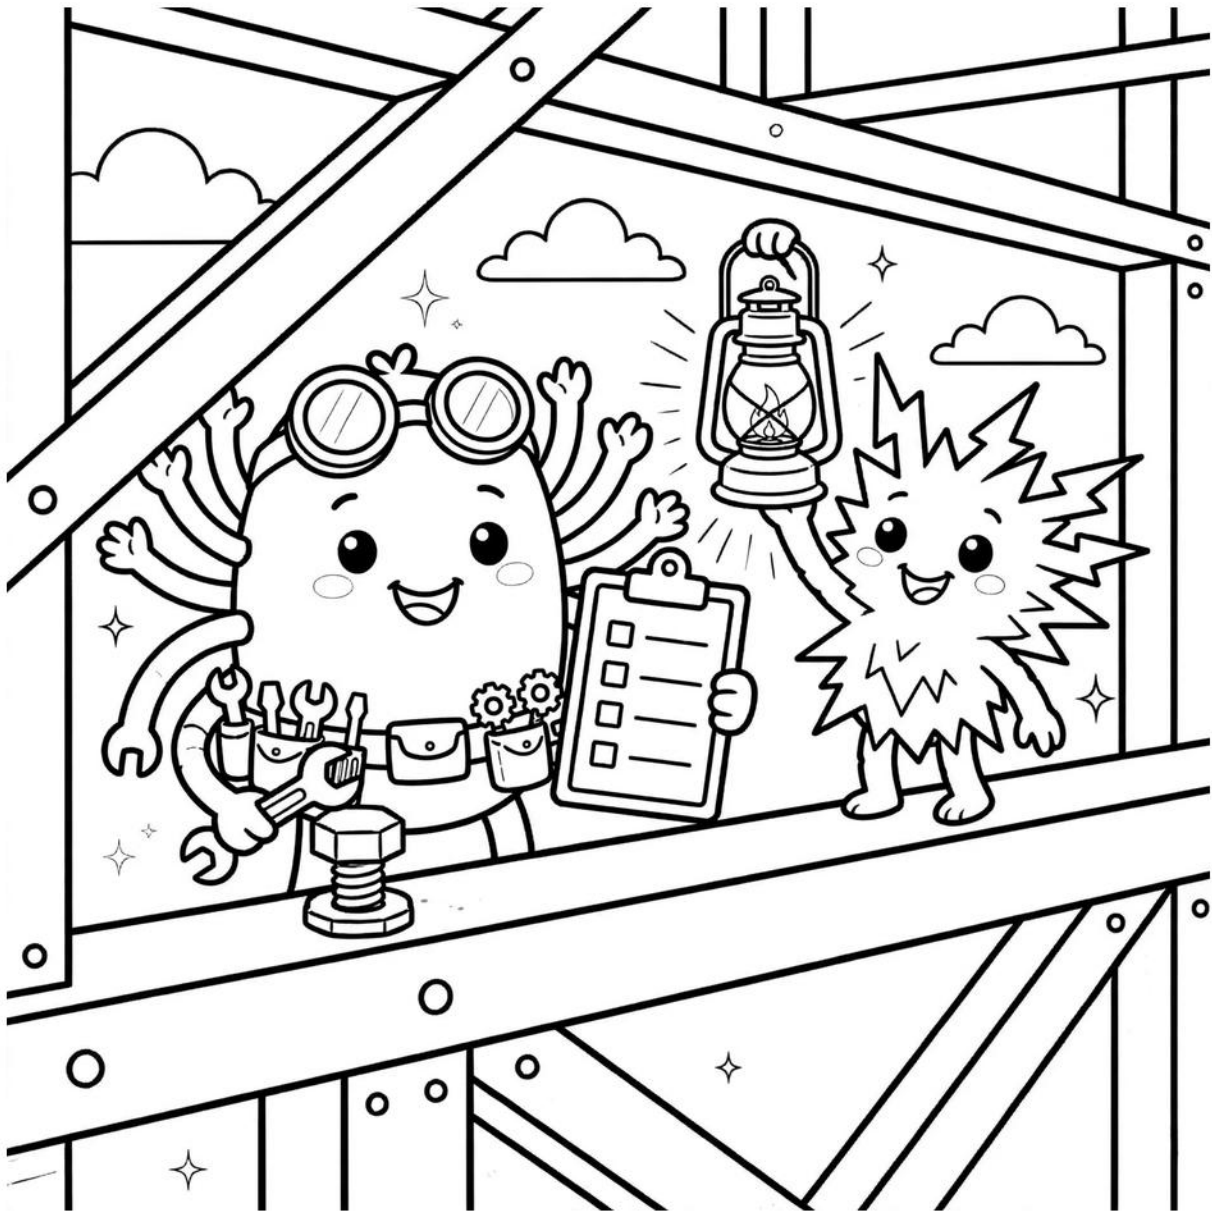

The towers stand on strong feet planted deep, deep under the river.

Sharing the Load

Every part shares the heavy load, so no single part carries it alone.

Fixit's Safety Check

Fixit taps every bolt and checks every cable to keep the bridge safe.

Across We Go!

Honk honk! Everyone crosses safely — hooray for bridges!
