

Glitch and the Rainy Day

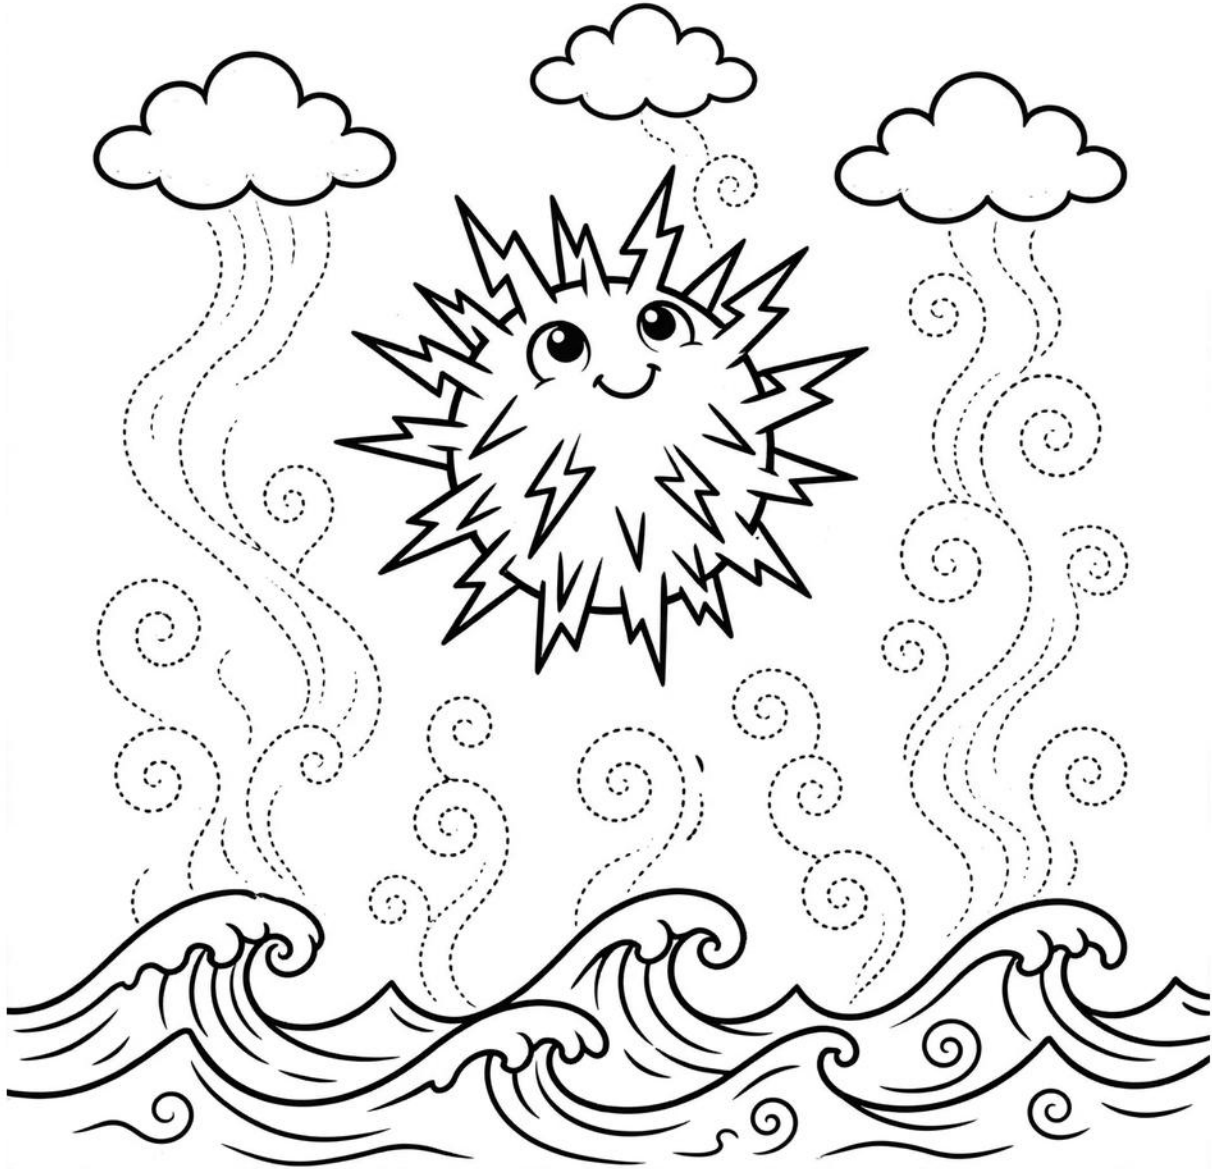

Savage AI Studios

The Thirsty Ocean

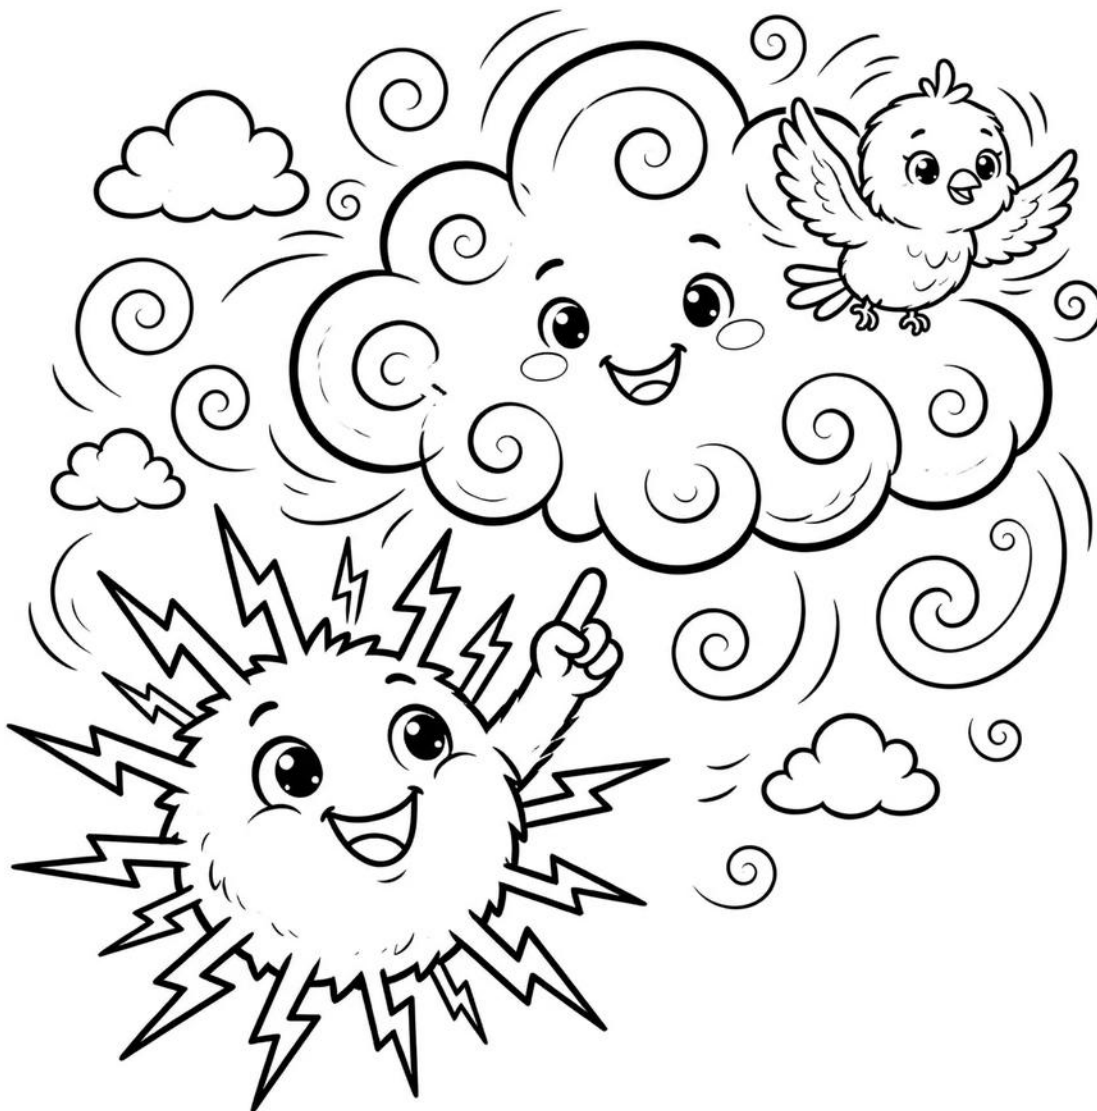

The warm sun heats the ocean, and teeny drops of water float up into the sky!

Up, Up It Goes

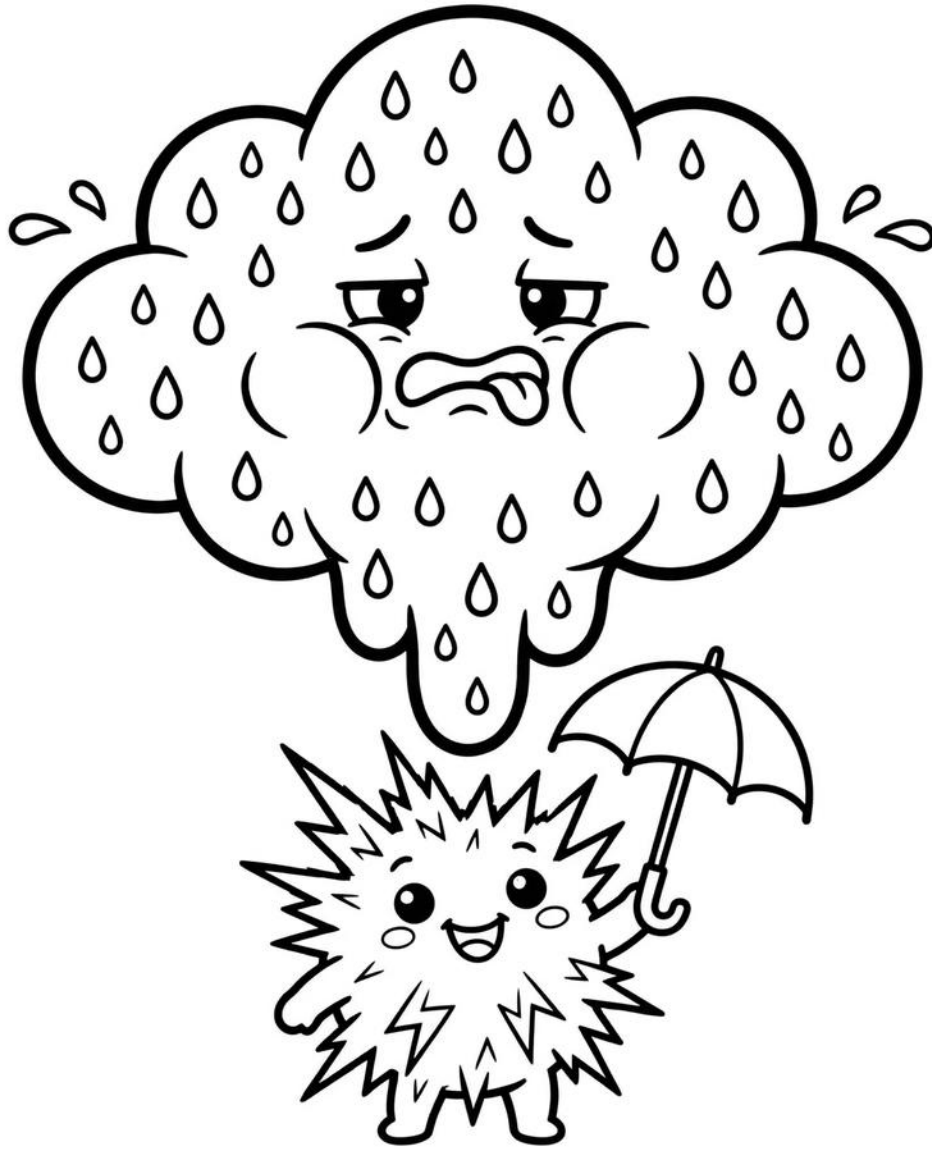

The rising water is called vapor — it's invisible, like a secret!

Clouds Are Born

High up where it's chilly, the vapor squeezes together into fluffy clouds.

Clouds Get Heavy

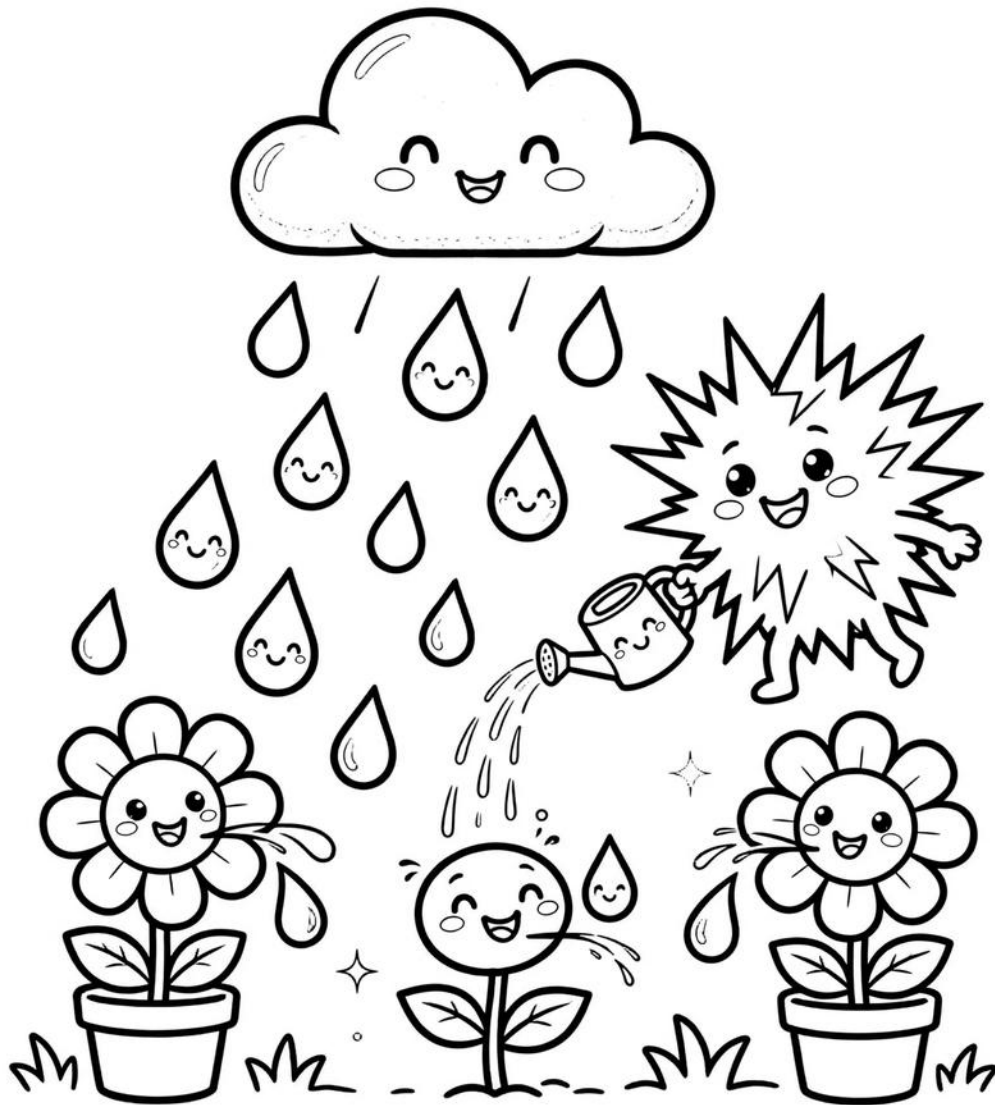

Clouds drink up more and more vapor until they get too heavy to float.

Here Comes the Rain!

Plip! Plop! The heavy cloud lets go, and water falls back down as rain.

A Drink for Plants

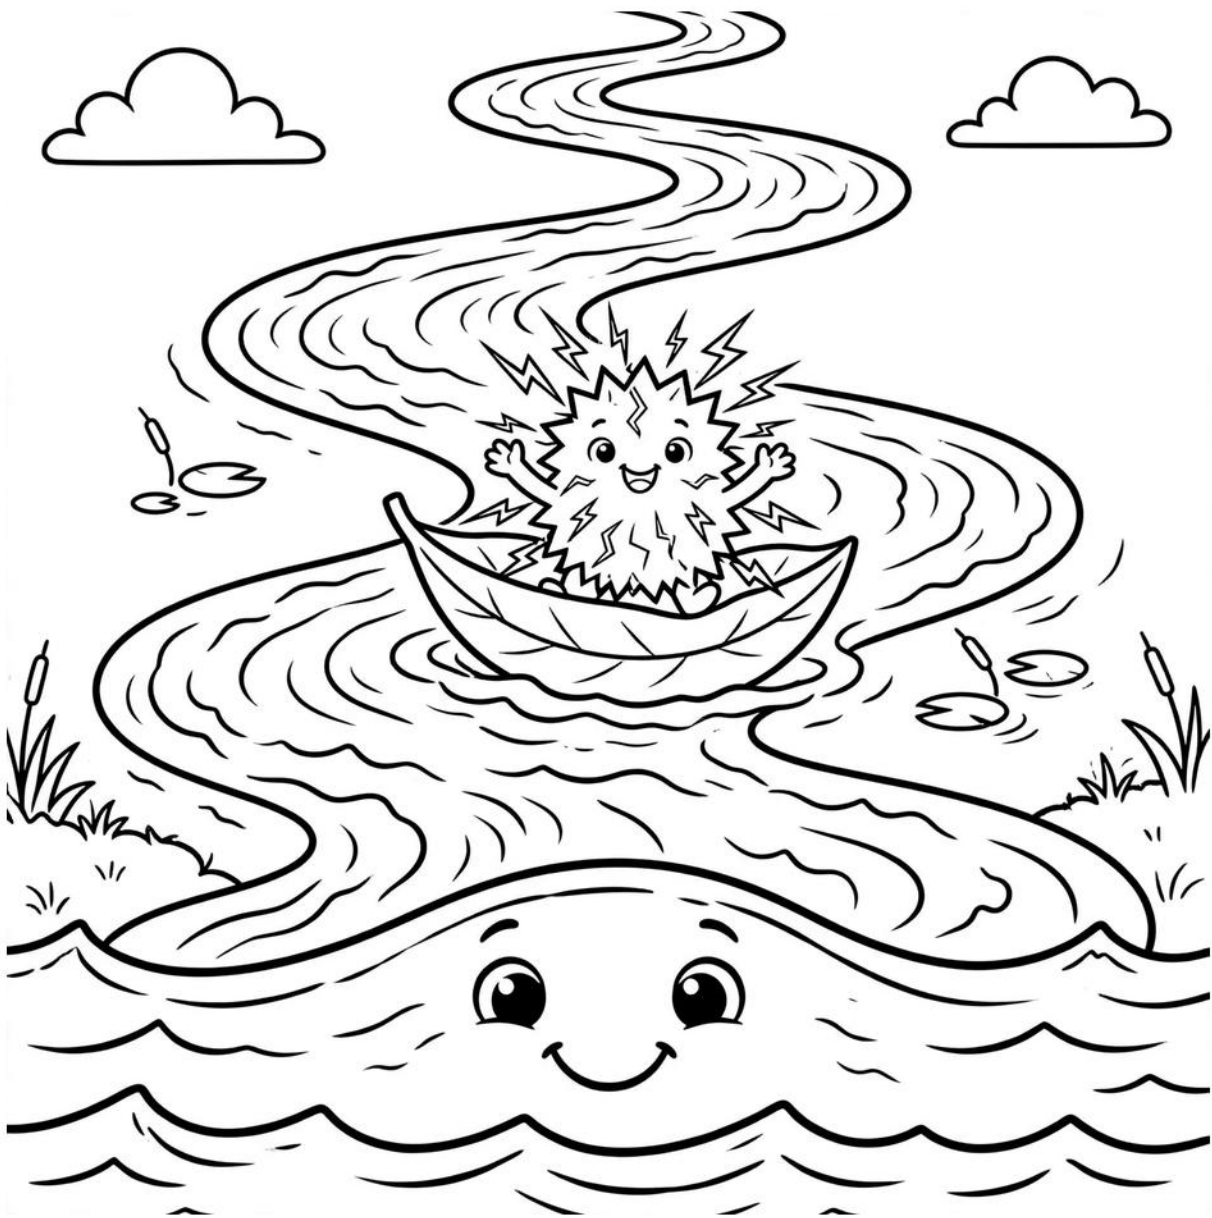

Rain gives thirsty plants and flowers a big cool drink.

Puddles and Streams

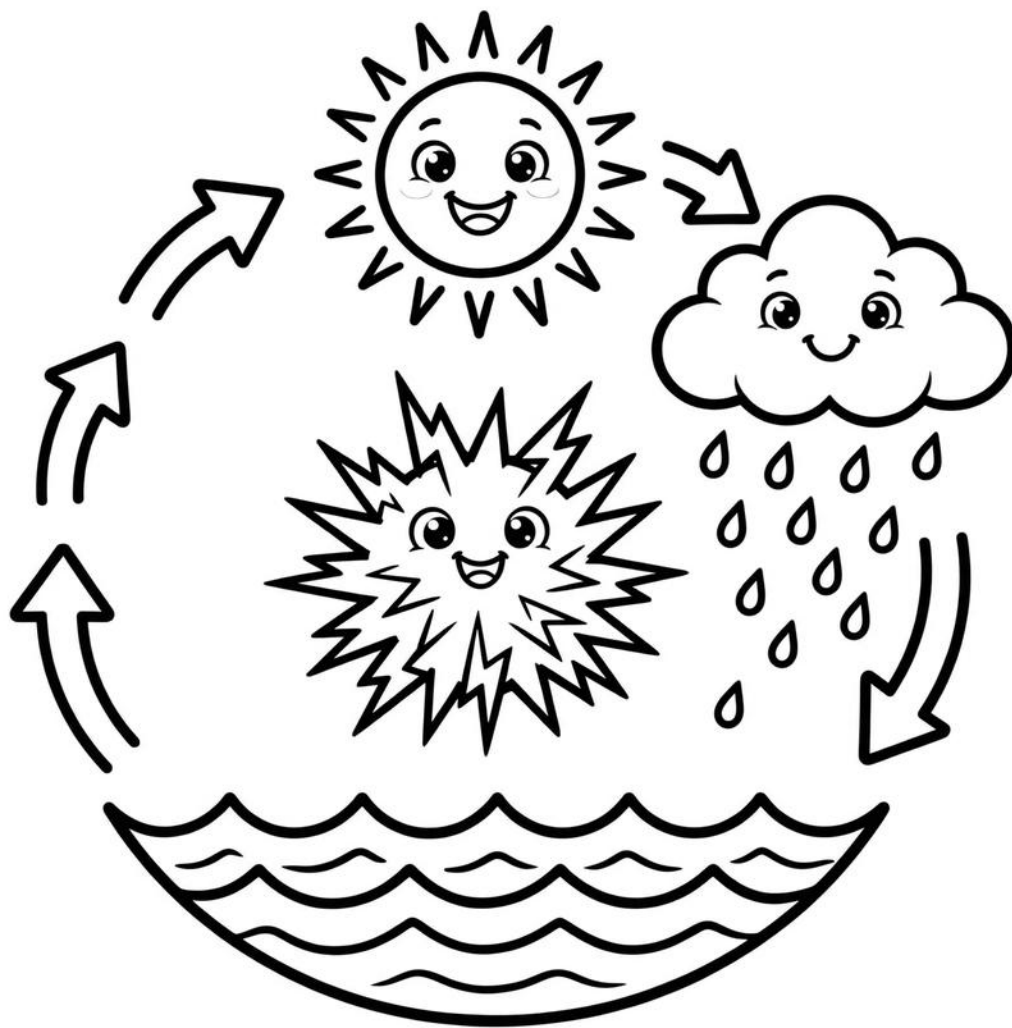

Rain gathers into puddles and streams that wiggle downhill.

Rivers Run Home

Streams join into rivers, and rivers carry the water all the way home to the sea.

Round and Round Again

Then the sun warms the ocean again — the water's round trip never ends!
